

“Certified Applied IT Security Professional” (CAISP)

Extra-occupational certificate program by remote learning

The isits AG International School of IT Security, together with Ruhr-Universität Bochum (RUB), offers an extra-occupational remote learning course for certification as “Certified Applied IT Security Professional” (CAISP). The internationally oriented certificate program is directed towards professionals without a subject-specific initial degree as well as people coming from other careers who would like to expand their qualifications profile with knowledge of IT security and new technologies.

Successful graduates receive a certificate from Ruhr-Universität Bochum and isits AG. This opens up new career opportunities in IT security, a rapidly expanding and attractive field with wide-ranging applications. The graduates can also work in all company areas and industries that have a strong relationship to ICT.

Your benefits at a glance

- › Certification as “Certified Applied IT Security Professional” (CAISP) from Ruhr-Universität Bochum.
- › No initial degree required.
- › Start of studies in summer or winter semester.
- › Program duration can be flexibly adapted thanks to modular design.
- › Advanced education alongside work – no need for a hiatus.
- › Flexible, individual learning with the freedom to set your own schedule.
- › One university certificate per module completed successfully.
- › Course contents can be applied to a later master’s degree program in “Applied IT Security” (M. Sc.).

Enjoy the advantages of
being a guest student at
Ruhr-Universität Bochum!

In the certificate program “Certified Applied IT Security Professional”, you learn up-to-date and in-depth specialist knowledge that you can use directly in your daily work. **You are investing in your professional development and improving your career prospects.**

Know-how from research and practice

A single program covers wide-ranging topics in IT security. Technical and mathematical foundations are taught in the required modules. In the area of electives, you then have the opportunity to specialize, apply the fundamentals in practical contexts and deepen your knowledge. You also gain insights into the legal principles underlying IT security.

The remote learning program consists of the following modules:

- › Cryptography
- › Discrete Mathematics for IT Security
- › Computer Science for IT Security
- › Information Technology for IT Security
- › Network Security
- › Security Protocols
- › Current Topics in IT Security
- › Implementation of Cryptographic Schemes
- › Mobile Security
- › Protecting Against Malware in Enterprises
- › Security Management
- › Systems Security ... and many more!
